

# DYK - DID YOU KNOW?

## Snag Resistant VS. Snag Proof

### What is the difference?

WARP KNIT

SNAG RESISTANT

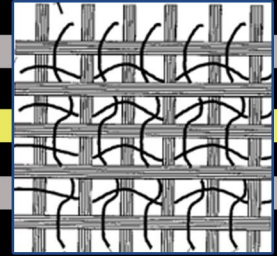

VS.

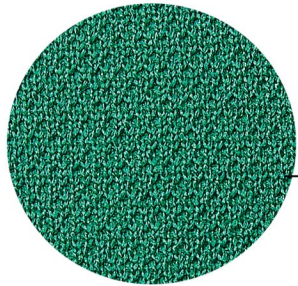

SNAG PROOF

PLATED JERSEY CONSTRUCTION

#### WHAT IS WARP KNIT?

- Stitches run roughly parallel to create a square construction
- More densely knitted together, which makes the fabric more resistant to runs

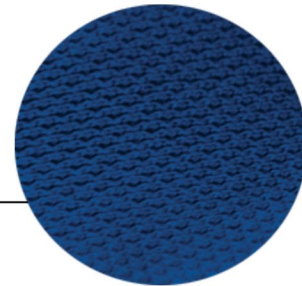

#### 100% POLYESTER FLAT TRICOT MICROPIQUE KNIT

- Uses fine polyester yarns combining knit construction of micropique waffle knit with flat tricot knit
- This allows durable performance fabric
- Developed for function of active and professional use

#### WHAT IS PLATED JERSEY CONSTRUCTION?

- Stitches on face side are formed by plating yarn, reverse side the ground (back) yarn.

#### 100% SNAG PROOF POLYESTER JERSEY

- Composed of sets of strong, substantially parallel, unidirectional yarns, lying in parallel planes
- One or more sets of yarn has lower and higher elongation interleaved with strong yarns
- Creates an interleaved fabric that is strong enough to resist snagging, even with a wire brush.
