

Composting Creates Jobs

Jobs are sustained in each stage of the organics recovery cycle.

PER 10,000 TONS WASTE/YEAR

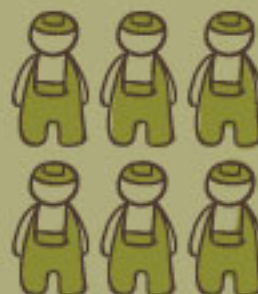

JOBS SUSTAINED

On a per-ton basis, making compost alone, employs **2x more workers than landfills** and **4x more than incinerators**.

Green infrastructure uses compost in rain gardens, green roofs, bioswales, vegetated retaining walls, and on steep highway embankments to control soil erosion and storm water. Using compost in green infrastructure creates **even more jobs**.
